PARKINOVA

Medical Assessment Report

A. Patient & Assessment Information

Patient Reference	Not provided
Age / Gender	20 / Male
Assessment Date	2026-11-01 06:03:59
Report Reference ID	408966a0-287f-4198-aab2-020ca35c92ff
Completed Modules	Brain MRI Scan, Archimedean Spiral Analysis, Symptom Questionnaire
Lead Evaluator	Dr. Researcher

B. Combined Assessment Summary

Analysis Component	Completion Status	Model Prediction
Brain MRI Scan	Completed	Parkinson's-related pattern detected
Spiral Drawing	Completed (Model Prediction)	Spiral drawing shows motor irregularities correlated with Parkinsonian tremor patterns

Multi-Modal Synthesis: Concordant Findings (Parkinsonian Pattern Detected)

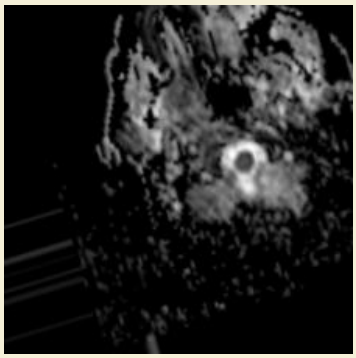
Both the MRI convolutional model and the Archimedean spiral drawing analysis identified distinctive features correlated with Parkinsonian disease patterns. Independent concordance across structural neuroimaging and fine-motor kinematics suggests that comprehensive clinical evaluation with a movement disorder specialist is warranted. This automated synthesis does not constitute a confirmed clinical diagnosis.

C. Patient Symptom & Cognitive Assessment Profile

Symptom Domain	Category	Patient Response
Memory Difficulties	*Cognitive*	Rarely
Difficulty Concentrating	*Cognitive*	Sometimes
Problems with Decision-Making	*Cognitive*	Rarely
Changes in Mood	*Emotional*	Rarely
Feelings of Anxiety	*Emotional*	Rarely
Symptoms of Depression	*Emotional*	Sometimes
Self-Reported Emotional Well-being	*Emotional*	Often
Sleep Disturbances	*Sleep & Energy*	Sometimes
Mental Fatigue	*Sleep & Energy*	Often
Reduced Motivation	*Sleep & Energy*	Sometimes
Difficulty with Daily Activities	*Functional*	Sometimes
Changes in Thinking Speed	*Functional*	Never
Difficulty Planning & Organizing	*Functional*	Rarely

Note: 13 of 13 self-reported questions completed on 2026-11-01 11:33:38. Symptom frequencies are self-reported for research and risk documentation purposes only; they do not independently constitute a diagnostic evaluation.

D. Brain MRI Scan Analysis

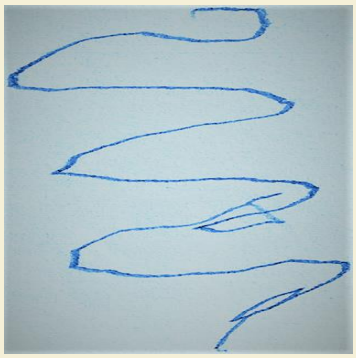


Analysis Status	Completed
Model Prediction	Parkinson's-related pattern detected
Model Architecture	Parkinson CNN (244x244x3)
Input Preprocessing	244x244 Lanczos Resizing, Channel Standardization
Image Source	aug_0_107.jpeg

Model Findings & Interpretation:

The CNN deep learning model identified structural and intensity patterns in the MRI scan that correlate with Parkinson's disease neuroimaging features present in the training dataset. This is an automated experimental observation and must be evaluated alongside clinical motor assessments, patient history, and expert radiologist review.

E. Archimedean Spiral Drawing Analysis



Analysis Status	Completed (Model Prediction)
Model Prediction	Spiral drawing shows motor irregularities correlated with Parkinsonian tremor patterns
Model Architecture	Archimedean Spiral YOLO / CNN (244x244x3)
Geometry & Stroke	Analyzed | Standard
Drawing Source	Parkinson953.png

Visual & Kinematic Observations:

- **dimensions:** 317 x 512 pixels
- **aspect_ratio:** 0.619:1
- **stroke_density_pct:** 10.96
- **canvas_style:** Light background (paper / digital canvas)
- **contrast_range:** 222.3
- **file_size_kb:** 17.5
- **Model Status:** YOLO Model Active (best)
- **Input Resolution:** 224x224 px
- **Predicted Class:** Parkinson

Regulatory Notice & Academic Disclaimer

This application is an academic AI research prototype. Its output is generated by a machine-learning model and is not a medical diagnosis. The model's performance and reliability may vary depending on image quality, dataset characteristics, and the images used during training. Consult a qualified neurologist for medical evaluation.
