PARKINOVA

Medical Assessment Report

A. Patient & Assessment Information

Patient Reference	API-TEST-PT
Age / Gender	Not specified / Not specified
Assessment Date	2026-10-27 12:00:00
Report Reference ID	API-TEST-001
Completed Modules	Brain MRI Scan, Archimedean Spiral Analysis
Lead Evaluator	Dr. Researcher

B. Combined Assessment Summary

Analysis Component	Completion Status	Model Prediction
Brain MRI Scan	Completed	No Parkinson's-related pattern detected
Spiral Drawing	Model Standby (Awaiting Trained Spiral Model File)	Standby — Integration Interface Ready

Multi-Modal Synthesis: MRI Evaluated · Spiral Verified

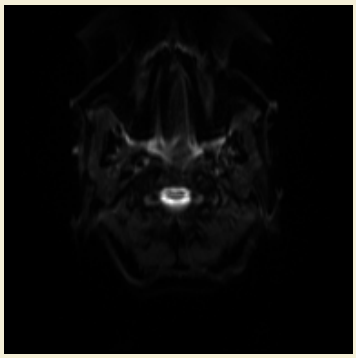
Brain MRI deep learning inference was successfully completed. The uploaded Archimedean spiral sketch was verified for geometry and stroke contrast and remains on integration standby. No synthetic combined risk score is calculated to protect diagnostic integrity.

C. Patient Symptom & Cognitive Assessment Profile

Questionnaire Status	Not Submitted / Incomplete
Documentation Note	Self-reported cognitive, emotional, sleep, and functional assessment was not recorded.

Note: Comprehensive neurological assessment requires patient symptom history in addition to imaging.

D. Brain MRI Scan Analysis



Analysis Status	Completed
Model Prediction	No Parkinson's-related pattern detected
Model Architecture	Parkinson CNN (244x244x3)
Input Preprocessing	244x244 Lanczos Resizing, Channel Standardization
Image Source	sample_normal_1.png

Model Findings & Interpretation:

Test explanation

E. Archimedean Spiral Drawing Analysis

[Spiral Drawing]
No thumbnail loaded

Analysis Status	Model Standby (Awaiting Trained Spiral Model File)
Model Prediction	Standby — Integration Interface Ready
Model Architecture	Archimedean Spiral YOLO / CNN (244x244x3)
Geometry & Stroke	400 x 400 pixels | Standard
Drawing Source	None

Visual & Kinematic Observations:

• **Image Geometry:** 400 x 400 pixels

Regulatory Notice & Academic Disclaimer

This application is an academic AI research prototype. Its output is generated by a machine-learning model and is not a medical diagnosis. The model's performance and reliability may vary depending on image quality, dataset characteristics, and the images used during training. Consult a qualified neurologist for medical evaluation.
